

You also need 4 half pinwheels!

To make 1 half pinwheel –

You need 1 blue strip and 1 white strip – can be scrap ends from your previous pinwheels that were made.

Stack them right sides together.

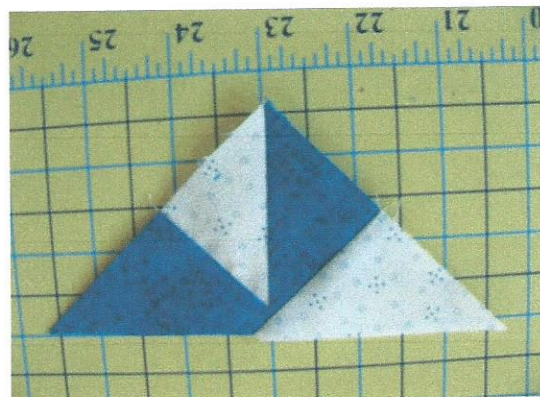

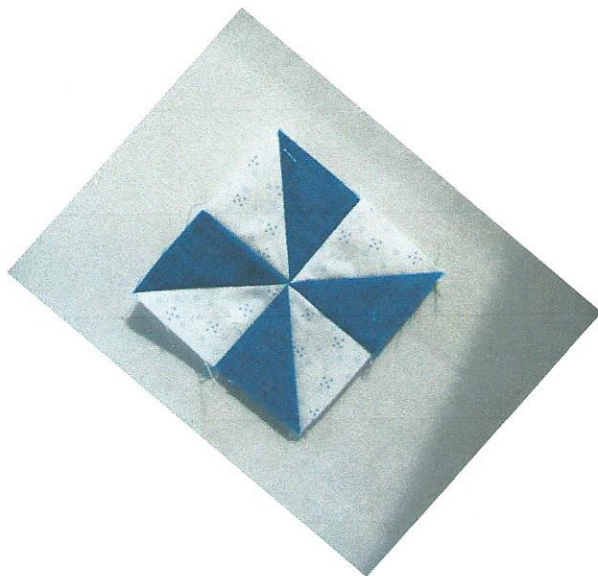

Cut with the EZ angle ruler – two pairs.

Sew one pair together to make your square – half white, half blue.

Take the other 2 triangles and put them on the side of the square to make a triangle, like you did with the half 4 patch triangle.

BUT -----

Look at the picture and make sure your pinwheel part turns the same direction as your other pinwheels!!

You can cut a blue and white square $2 \frac{3}{8}$ " and cut across them once diagonally to make your triangles.
